

## **New Remote Reporting Upgrade available**

**Nuremberg - 28 June 2021** - In order to broadcast a report when the studios are unmanned – which is often the case at many radio stations in the evenings and at night – a reporter can use the *Remote Reporting Upgrade* to carry out a live report via his mobile phone. After dialling into the device, a freely definable PIN must be entered. A confirmation tone then sounds to indicate whether the entry was correct. The caller is then switched directly to the programme. To end the transmission, the reporter simply has to hang up.

The *Remote Reporting Upgrade* can also be used for emergency announcements. Instead of a reporter, the police, fire brigade or emergency services can then dial in directly. To prevent misuse, certain phone numbers can be white-listed in the phone book. Only these authorised numbers can then dial in.

The Remote Reporting Upgrade is available for all MAGIC TH1Go, MAGIC TH2plus, MAGIC TH6 and MAGIC THipPro telephone hybrids. For the evaluation of the PIN, the optional *DTMF Analyzer Plug-In* is additionally required. For the MAGIC TH1Go, the upgrade can only be configured with the optional Windows PC software or the System Manager Upgrade.

### **About AVT Audio Video Technologies GmbH**

Founded in 1996, AVT Audio Video Technologies GmbH is a manufacturer of professional audio transmission equipment. For more than 20 years, AVT has been equipping broadcasters and service providers around the world with innovative products in the fields of audio codecs, telephone hybrids and DAB/DAB+ equipment.
